Top Tips

Did you know that 1/3 of older people will experience a fall at least once a year. Even if the fall doesn't cause physical harm, it can really affect confidence. Getting out and about is really important to keep doing the things you enjoy and it helps you to stay connected. As we get older, falling or fear of falling can stop us from being physically active and living our best life.

Here are some top tips to help make sure that you can do all these things, whilst reducing your chances of having a fall. You might not need all of this information right now, but it's here whenever you do.

Look after your eyes

- Get your eyes tested for free every 2 years
- Clean your glasses regularly

Look after your ears

- Changes in your hearing can be disorientating
- Speak to your GP if you have concerns

Look after your feet

- Don't ignore pain, calluses, long toenails or poor circulation

Wear the right shoes

- Wear shoes and slippers that fit properly
- Ensure your footwear suits the weather conditions

Review your medication

- Talk to your health professional at your next visit. A medication review can help manage any side effects.

Strengthen your bones

- Eat a balanced diet rich in calcium
- Go out walking and try the Super 6 exercises
- Increase your Vitamin D intake

Keep your home safe

- Avoid poor lighting, loose rugs, cables and clutter
- Use your walking aid if you have one
- Take your time when going to the phone or front door

Being prepared in case you have a fall

Fear of falling, especially after a trip or fall, can lead to anxiety and avoidance of movement. This can weaken your muscles and increase fall risk, so it's crucial to stay active and mobile.

Don't wait until you fall. Creating a Falls Plan can be useful in reassuring you that you know what you would do if you did have a fall. Things to consider in your falls plan include;

- ✓ Think about how you might get up if you had a fall.
- ✓ Consider how you would get help if you fell. Do you carry a mobile phone, have a community alarm, or live with someone who can assist you?
- ✓ Know the 'Rest and Wait' Plan
 - Call for help
 - Keep warm
 - Keep moving

If you are concerned about falls, you should contact your GP or if you would like input from an occupational therapist or physiotherapist, you can self-refer to the NHS Community Adult Assessment & Rehabilitation Service by calling 01224 558399

SUPER 6 EXERCISES!

To help you maintain your balance, try doing these 'Super Six' exercises three times a week, and walk daily if you can.

- ✓ Use a sturdy and stable chair, table or worktop for support.
- ✓ Wear supportive shoes and comfortable clothes.
- ✓ You may feel muscle soreness the next day, which is normal. If you experience pain during or after the exercises, stop and seek medical advice.
- ✓ If you experience chest pain or severe dizziness STOP IMMEDIATELY and contact your GP or 111 if your GP Practice is closed.
- ✓ Try not to hold your breath - breathe normally during the exercises.

1

SIT TO STAND

Sit tall near the front of your chair with feet hip-width apart. Lean forward and stand up slowly, using your hands if needed. Step back until your legs touch the chair, then lower yourself back down.

Repeat up to 10 times.

2

HEEL RAISES

Stand tall with your feet hip width apart. Hold your support. Slowly lift up your heels, keeping the weight up your big toes. Try not to lock your knees. Aim to lift for a slow count of 3 and lower for a slow count of 5 each time.

Repeat up to 10 times.

3

TOE RAISES

Stand tall with your feet hip width apart. Hold your support. Slowly lift the front of your foot, keeping your knees soft. Try not to stick your bottom out. Lower the toes slowly. Aim to lift for a slow count of 3 and lower for a slow count of 5 each time.

Repeat up to 10 times.

4

HEEL TOE STAND

Stand tall, holding on. Place one foot in front of the other so that your feet form a straight line. Look ahead and balance for 10 seconds - taking your hands off if possible. Take your feet back to hip width apart.

Repeat with the other foot in front, balancing for another 10 seconds.

5

HEEL TOE WALKING

Stand side on to your support. Walk 10 steps forward, placing one foot directly in front of the other. Look ahead and move slowly, holding on only if necessary. Return your feet to hip width, then turn toward your support.

Repeat in the other direction.

6

ONE LEG STAND

Stand close to your support and hold on. Balance on one leg, keeping your leg straight but your knee soft. Stand tall. Hold for 10 seconds.

Repeat with the other leg.

**Try and do these
3 times a week!**

Keeping safe to avoid trips and falls

Follow these tips to keep your home hazard free!

Approaching your home

- Walkways are smooth and level
- Paths are clear of clutter
- Hedges and bushes are cut back
- You have external/motion-sensor lighting
- Any steps to the door have rails on either side
- The threshold is low enough not to trip

Hall & Stairs

- Sufficient lighting, all bulbs are in place
- Light switches located at both the top and bottom of the stairs
- No loose rugs or mats to trip over
- Stairs are clear of clutter
- Handrails are sturdy and secure
- Carpet is in good condition, no loose floorboards present

Bathroom

- Any rugs/mats/bathmats are non-slip
- There are grab rails near the bath and toilet
- You can easily reach the toilet paper
- There is somewhere to sit if you feel dizzy

Bedroom

- There is a lamp close to the bed
- You have a nightlight or torch
- The path to the bathroom is clear and well lit
- There is a phone near the bed
- Any rugs/carpets are secure
- You have a way to support yourself when getting in and out of bed, if you need it

Living Room

- There is enough light
- Every piece of furniture is necessary, too many tables and chairs can block your path
- The furniture is stable
- There is a clear path to walk through
- Electrical cords are behind the furniture and not across the floor
- There are no electrical cables you could trip on

Kitchen

- The floor is clean and free of spills
- Floor coverings are in good repair and securely fixed
- The things you use most often are within easy reach
- If you have a step stool to reach things high up, this should be stable and have a handrail
